

# CANNABIS FEEDING CHARTS

**VEGAMATRIX™**  
CLEANER BIGGER BETTER  
★★★★

THE EVOLUTION OF AGRI-CULTURE

Your water supply will affect how often and what strength you should use Amp-It.

Using RO water will increase demand for Amp-It.

Hard-N-Quick should be applied twice weekly strictly as a foliar application from mid-vegetative through the early flowering stage.

Vegamatrix works best in soil/soilless media enriched with beneficial bacteria and microbes.

Vegamatrix recipes are designed to be fed with every watering.

Every 2-4 weeks we suggest a single watering with only Prime Zyme and a microbial inoculant.

Vegamatrix works well with other media types so long as nutrients are used within 12 hours of mixing.

Vegamatrix is not suitable for flood and drain repeat use reservoirs. Use only as drain to waste.

Vegamatrix nutrients rarely need pH adjusting.

Veganic nutrients are bioavailable over a pH range of 5.5-6.5

Check the soil pH or run off to insure the pH levels stay within the acceptable range.
